- CMS - Wordpress
- MVC Framework – Laravel
- Final Project

What does a web designer and developer do?

A web designer is a graphic artist who is responsible for designing the layout, usability, and visual appearance of a website. A successful web designer must possess an array of creative, graphic, and technical skills. A web developer is someone who builds and maintains the core structure of a website.

Laravel is a web application framework with expressive, elegant syntax. **Laravel** attempts to take the pain out of development by easing common tasks used in the majority of web projects, such as authentication, routing, sessions, and caching.
