AngularJS is a structural framework for creating dynamic web applications. HTML is a great declarative language for static pages. It does not contain much for creating dynamic applications. So Angular will be filling that gap.

Learning **AnjularJS** allows you reduce the amount of code you write to build rich user interface applications. Increase the reliability and maintainability of UI by using data binding. Retrieve data from back-end server, manipulate it and display it with ease. Modularize your code with the custom services and directives. Providing two way binding of data. Create Single Page Applications (SPA).

As **AngularJS** uses Model-View-Controller (MVC) and Model-View-Viewmodel (MVVM) architecture on the client side, it has become the favourite technology of most companies in India and abroad. As AngularJS is highly versatile and robust it is being used by many big companies like PayPal, Freelancer and Upwork.
