SQL is Structured Query Language, which is a computer language for storing, manipulating and retrieving data stored in a relational database. SQL is the standard language for Relational Database System. All the Relational Database Management Systems (RDMS) like MySQL, MS Access, Oracle, Sybase, Informix, Postgres and SQL Server use SQL as their standard database language.

Learning SQL allows **you to consolidate data from multiple data sources and convert complex data sets to actionable intelligence**. More broadly, learning to build good SQL queries helps develop team members' logical thinking skills.

Knowing SQL will help you to easily get the information from data at high efficiency. With the help of SQL queries, you can view update events, monitor table, and database activity, identify specific data at time intervals and retrieve the information based on the requirement.
